

Nitril 240 mm

SafeDon Hygiene System

Et revolusjonerende dispenseringsystem for hansker

Unngå berøring av hanskens mest kritiske overflater, boksen, og de andre hanskene i boksen ved å enkelt dispensere en og en hanske med mansjetten først.

Systemets fordeler

- » Unngå berøring rundt boksens åpning
- » Unngå berøring på hanskens mest kritiske overflate:
 - tommel, fingre og håndflate
- » Unngå berøring av andre "ubrukte" hansker inne i boksen
- » Unngå at hansker faller ut av boksen

Antall i kartong: 2 000 stk (XL 1 840)

Strl.	Art. nr.	Bredde (mm)	Vekt hanske (gr)	Antall
XS	SDN-200-01	≤ 80	3,2 ± 0,2	250
S	SDN-200-02	80 ± 10	3,2 ± 0,2	250
M	SDN-200-03	95 ± 10	3,2 ± 0,2	250
L	SDN-200-04	110 ± 10	3,2 ± 0,2	250
XL	SDN-200-05	≥ 110	3,2 ± 0,2	230

Bruksområde

Et svært godt egnet hygiene system på arbeidsplasser der hånd hygiene er kritisk, og ved risiko for krysskontaminering. Godkjent som medisinsk utstyr.

Spesifikasjoner

Nitrilhansken er særdeles tynn med ekstrem komfort som gir et godt grep og god fingerfølsomhet. Hansken er også sterk og holdbar.

- Økt gjennombruddstid mot et bredere spekter av kjemikalier enn lateks hansker av samme tykkelse
- Høy strekkfasthet og punkteringsmotstand
- Lateksfri / Pufferfri / Ikke-steril

Type hanske: Ikke-steril, 240 mm
Primærmateriale: Acrylonitril - butadiene. 100% Nitril materiale som eliminerer Type I allergiske reaksjoner assosiert med NR-Lateks protein
Pulver: Pufferfri
Farge: Blå (PMS 285 U)
Produktdesign: Ambidextrous, mikroteksturerte fingre og rullekant

Forpakningen
sorteres som
papp/papir

Hanskene
sorteres som
restavfall

1	> 10
2	> 30
3	> 60
4	> 120
5	> 240
6	> 480

For complete list of chemicals tested - please contact us at post@safedon.no

- EN 374-4: 2013 Degradation levels indicate the change in puncture resistance of the gloves after exposure to the challenge chemical.
- EN 374-5: 2016 The penetration resistance has been assessed under laboratory conditions and relates only to the tested specimens.
- Finger dexterity has been tested according to EN420: 2003+A1:2009 and has reached level 5 (Classification min level 1, maximum level 5).
- This information does not reflect the actual duration of protection in the workplace and the differentiation between mixtures and pure chemicals.
- The chemical resistance has been assessed under laboratory conditions from samples taken from the palm only (except in cases where the glove is equal to over 400 mm - where the cuff is tested also) and relates only to the chemical tested. It can be different if the chemical is used in a mixture.
- It is recommended to check that the gloves are suitable for their intended use because of the conditions at the workplace may differ from the type test depending on temperature, abrasion and degradation.
- When used, protective gloves may provide less resistance to the dangerous chemical due to changes in physical properties. Movements, snagging, rubbing, degradation caused by chemical contact etc. may reduce the actual use time significantly. For corrosive chemicals, degradation can be the most important factor to consider in selection of chemical resistant gloves. Before usage, inspect the gloves for any defect or imperfections.

Certified as Personal Protective Equipment of Complex Design Category III as per PPE Regulation (EU) 2016/425. In accordance with EN ISO 374-1: 2016, EN ISO 374-5: 2016, EN 420: 2003+A1:2009. Medical Device is as Class I as per MDR(EU) 2017/745. In accordance with EN 455-1: 2000, EN 455-2: 2015, EN 455-3: 2015 and EN 455-4: 2009.
